

## Monaco

Monte Carlo Radiodiffusion (MCR) has been testing on short-wave from Fontbonne or Mont Agel and also on medium wave 702 kHz from Col de la Madonne. One or two of MCR's sites are now under-utilized and are ideal candidates for conversion to DRM.

MCR has been testing to France for several months on 6165/6175 kHz and also has had a local 26 MHz transmitter. The transmitters have been silent since mid-2007
