

Croatia

Hrvatski Radio Croatia started testing on 594 kHz from Deanovac using dual channels. The Glas Hrvatske programme was in parametric stereo (AAC) and there is also a mono HVXC service called HR Info.

As of 2007 there is just a single audio service at 19.08 kbps.

It is expected that HR will convert the 1134 kHz transmitter to DRM later this year (2009) following the closure of 1125 kHz.
